

Music & Movies Playing Continuously

Music or Movies plays continuously when using Laptop or regular computer. You cannot get it to play continuously on Mobile device - phone or tablet (Android or iPhone). Please check it out.

=> There are difference between rendering process in mobile and desktop browser, this is working if we set browser in desktop view in mobile, so we have to make changes accordingly, in mobile screen need to change HTML process with help of designer and new scripts.

Estimated Time: 16 Hrs.

This as well as Rearranging videos was in the original design of PrimeHangout right from the beginning. Please check the code for 2011 -2014 and you should see it there.

Share Video Link

The screenshot shows a 'Share Link' form with the following fields and annotations:

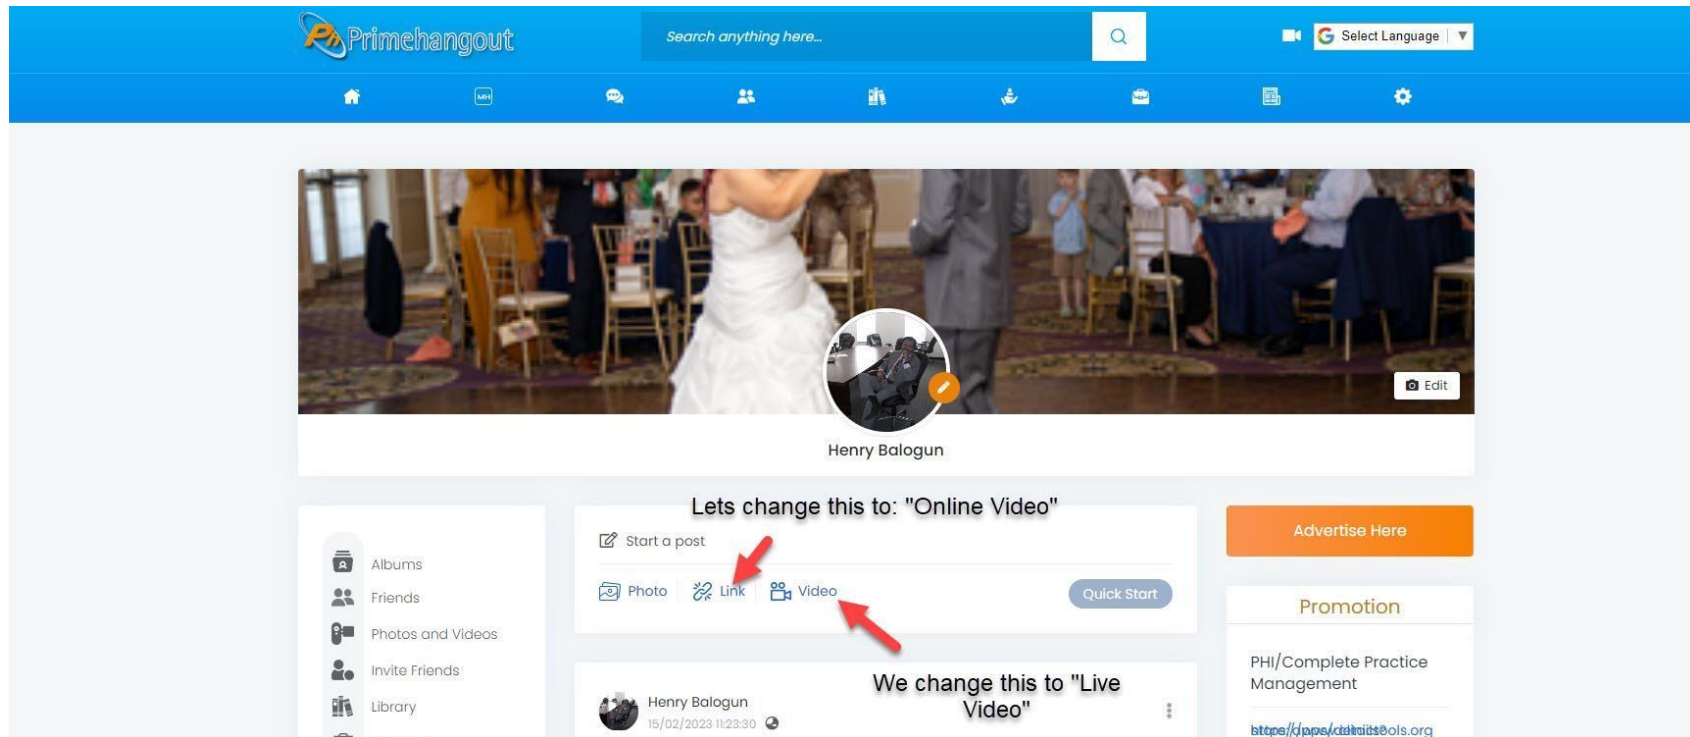

- Share Link**: The main title of the form, with a red arrow pointing to it from the text 'Change to: Share Video Link'.
- Change to: Share Video Link**: Text annotation above the main title.
- Public**: A button in the top right corner.
- Country**: A dropdown menu with 'Aland Islands' selected.
- Select Type**: A dropdown menu with 'Adventure' selected.
- About Video**: A text input field with the placeholder 'Enter About Video'.
- Link**: A text input field with the placeholder 'Enter YouTube Video Link'.
- Info**: A modal popup message box with the text: 'Please make sure what you are about to upload are exclusively yours or available in the public domain or you have obtained permission from the original owner prior to uploading'. It has a red 'X' over it and a red arrow pointing to it from the text 'Remove this popup message'.
- Cancel**: A button at the bottom left of the form.
- Submit**: A button at the bottom right of the form.

=> We will change the description as you mentioned and remove the info message box.

=> Impacted ares are dashboard and profile page.

=> **Estimation = 1 hours for changes and testing.**

Live Music and Online Video

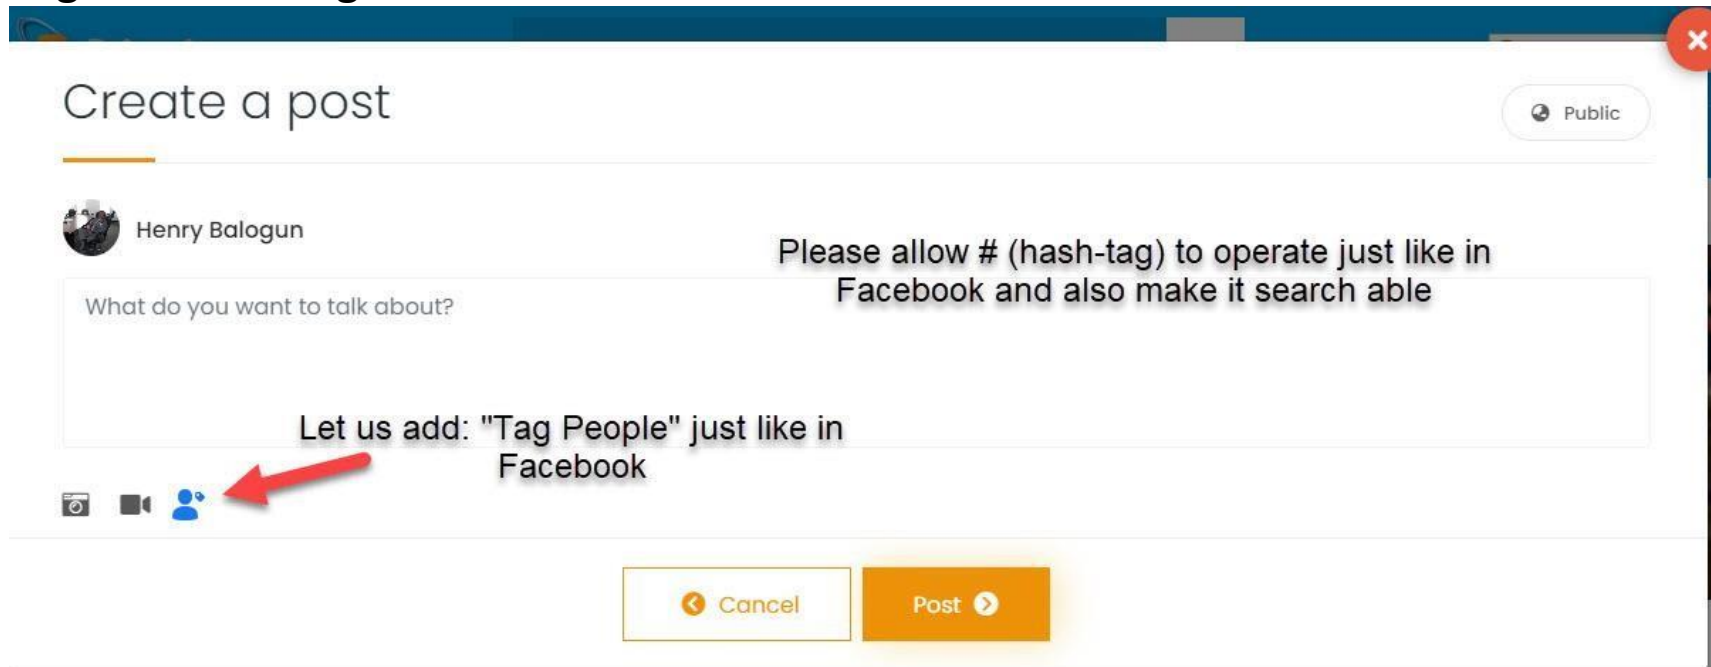

=> As we assume that would be only text changes, please let us know if you are expecting live streaming features here.

=> Impacted areas are dashboard and profile page.

=> Estimation = No Estimation require.

Feel free to provide estimation for Live Streaming. It would be good to know

Tag and Hash-Tag

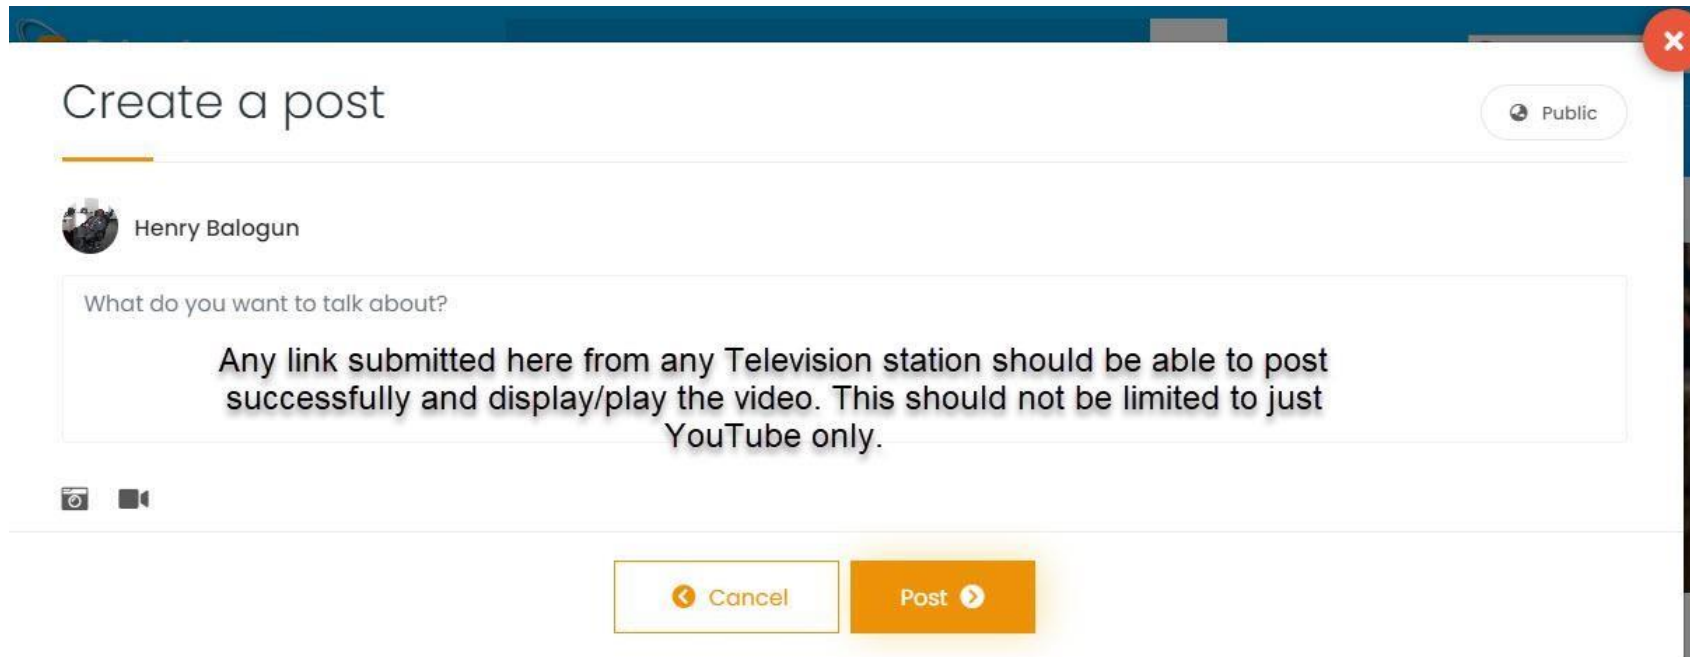

The screenshot shows the 'Create a post' interface on Facebook. At the top, there's a blue header bar. Below it, the text 'Create a post' is displayed. To the right of this text is a 'Public' button with a globe icon. Below the header, the user's profile picture and name 'Henry Balogun' are shown. A large text input area contains the placeholder text 'What do you want to talk about?'. To the right of this input area, there is a text annotation: 'Please allow # (hash-tag) to operate just like in Facebook and also make it search able'. Below the input area, there are three icons: a photo icon, a video icon, and a 'Tag People' icon (a person with a plus sign). A red arrow points to the 'Tag People' icon with the text 'Let us add: "Tag People" just like in Facebook'. At the bottom, there are two buttons: 'Cancel' (with a left arrow) and 'Post' (with a right arrow).

=> On facebook tag, people also notified on which post they have been tagged, facebook has features to set restrictions no one allowed to tag you, only friends can allow or friend of friend is allowed to tag you. So we assume these 2 features will be part of this task.

Will the tagging allowed on Images as well? Or it would be for comment sections text only? Please confirm so that we can share effort time accordingly.

The best approach is to tag only those who are your Friends to avoid anyone being offended. The system should be able to display the image of what you are tagged. No additional image is necessary for now.

Video from TV Stations

Create a post

Public

Henry Balogun

What do you want to talk about?

Any link submitted here from any Television station should be able to post successfully and display/play the video. This should not be limited to just YouTube only.

Cancel Post

=> You tube is self get thumbnail and title and description for showing on post when we post the youtube link, but this functionality may or may not support same thumbnail and description features as every video service providers have their own features and limitations, so please confirm if that would be acceptable then we can provide you estimation accordingly.

=> Apart from that there will not be any validate functionality for video link, mean apart from youtube video link verification may be or may be not respond like youtube handles itself in browser, we are checking for it and let you know.

=> Please provide some links from various platforms so that we can check the feasibility accordingly.

Currently, there is no problem with YouTube. With regard to other platforms, most of their links uses MPEG-4, MP4 and AVI. If we can at least make it compatible with these along with it's current YouTube format, that would be great. However, more is better. Check out the following two links:
